It said the first trench will be dug on the C.O.D. vein at its southern end where some of the world's best intercepts were reported last year, including 129 grams per ton (g/t) gold, 1,154 g/t silver and 823 g/t tellurium over 7.28 meters of core length.

"Initial field work has focused on preparation for trenching and drilling, with targets being marked out at the C.O.D. vein, Rhoderick Dhu, and Gold Drop mine areas," GGX said in the statement.

"These areas will be trenched first and then drilled. Also, all the previous drill holes and trenches from 2017 and 2018 at the COD were surveyed with a Trimble Geo7X instrument for sub-meter accuracy, and prospecting and rock sampling was started.

"Trenches were marked at two parallel veins located west of the C.O.D., one of which returned a grab sample last year that assayed 55.8 grams per tonne gold and greater than 100 grams per tonne silver," added the firm.
